Civil society organizations advocating for community needs

Community-Based Organizations (CBOs) and Local Residents

The project included a two-phase stakeholder engagement process:
Phase 1 (October 2023): Focus group meetings with key stakeholders, likely including local community representatives.
Phase 2: Public consultation as part of the Heritage Impact Assessment and Land Use Management processes.

These engagements allowed civil society actors to:
Review development concepts
Provide feedback
Influence the final design

Heritage and Cultural Advocacy Groups
Due to the presence of heritage-graded buildings and former burial grounds, it is likely that heritage preservation groups and cultural organizations were consulted or involved.

Social Justice and Housing Advocacy Groups
The project's emphasis on affordable and social housing, spatial justice, and urban redress suggests alignment with the goals of civil society groups focused on:
Housing rights
Anti-displacement
Inclusive urban development

Opportunities for Civil Society Involvement
Ongoing monitoring of implementation and social impact
Participation in procurement oversight (e.g., gender-responsive procurement)
Community benefit agreements or local hiring initiatives

The Sustainable Infrastructure Development and Financial Facility (SIDAFF) is a WCG-led initiative designed to:

Aggregate municipal infrastructure projects into a bankable portfolio.
Blend local and international finance, grants, and donor funding.
Support municipal water, wastewater, and potentially housing infrastructure.

Potential State-Owned Entity Stakeholders (Inferred)

1. Human Settlements Development Bank (HSDB)
Could be involved in financing the affordable housing component of the project.

2. Infrastructure South Africa (ISA)
May support the project as part of the national infrastructure pipeline, especially if it aligns with the National Infrastructure Plan (NIP 2050).

3. South African Heritage Resources Agency (SAHRA)
Although not a traditional SDE, SAHRA is a statutory body that may have been involved in the Heritage Impact Assessment (HIA) process under the National Heritage Resources Act.

4. Property Management Trading Entity (PMTE)
If national public land or assets are involved, PMTE (under the Department of Public Works and Infrastructure) may play a role in land transfer or asset management.
